

# cutter

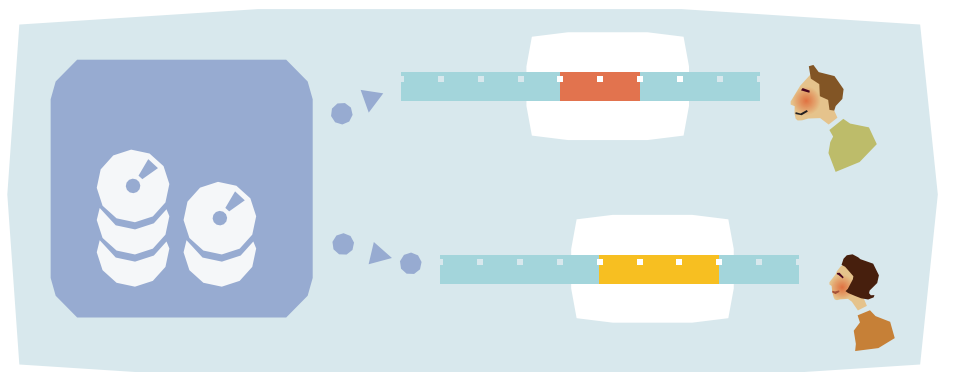

A software component which enables novel web-based applications for video sharing and navigation.

## traditional way of sharing and watching small video clips

Edit the video into smaller pieces using editing software, and publish them on the server.

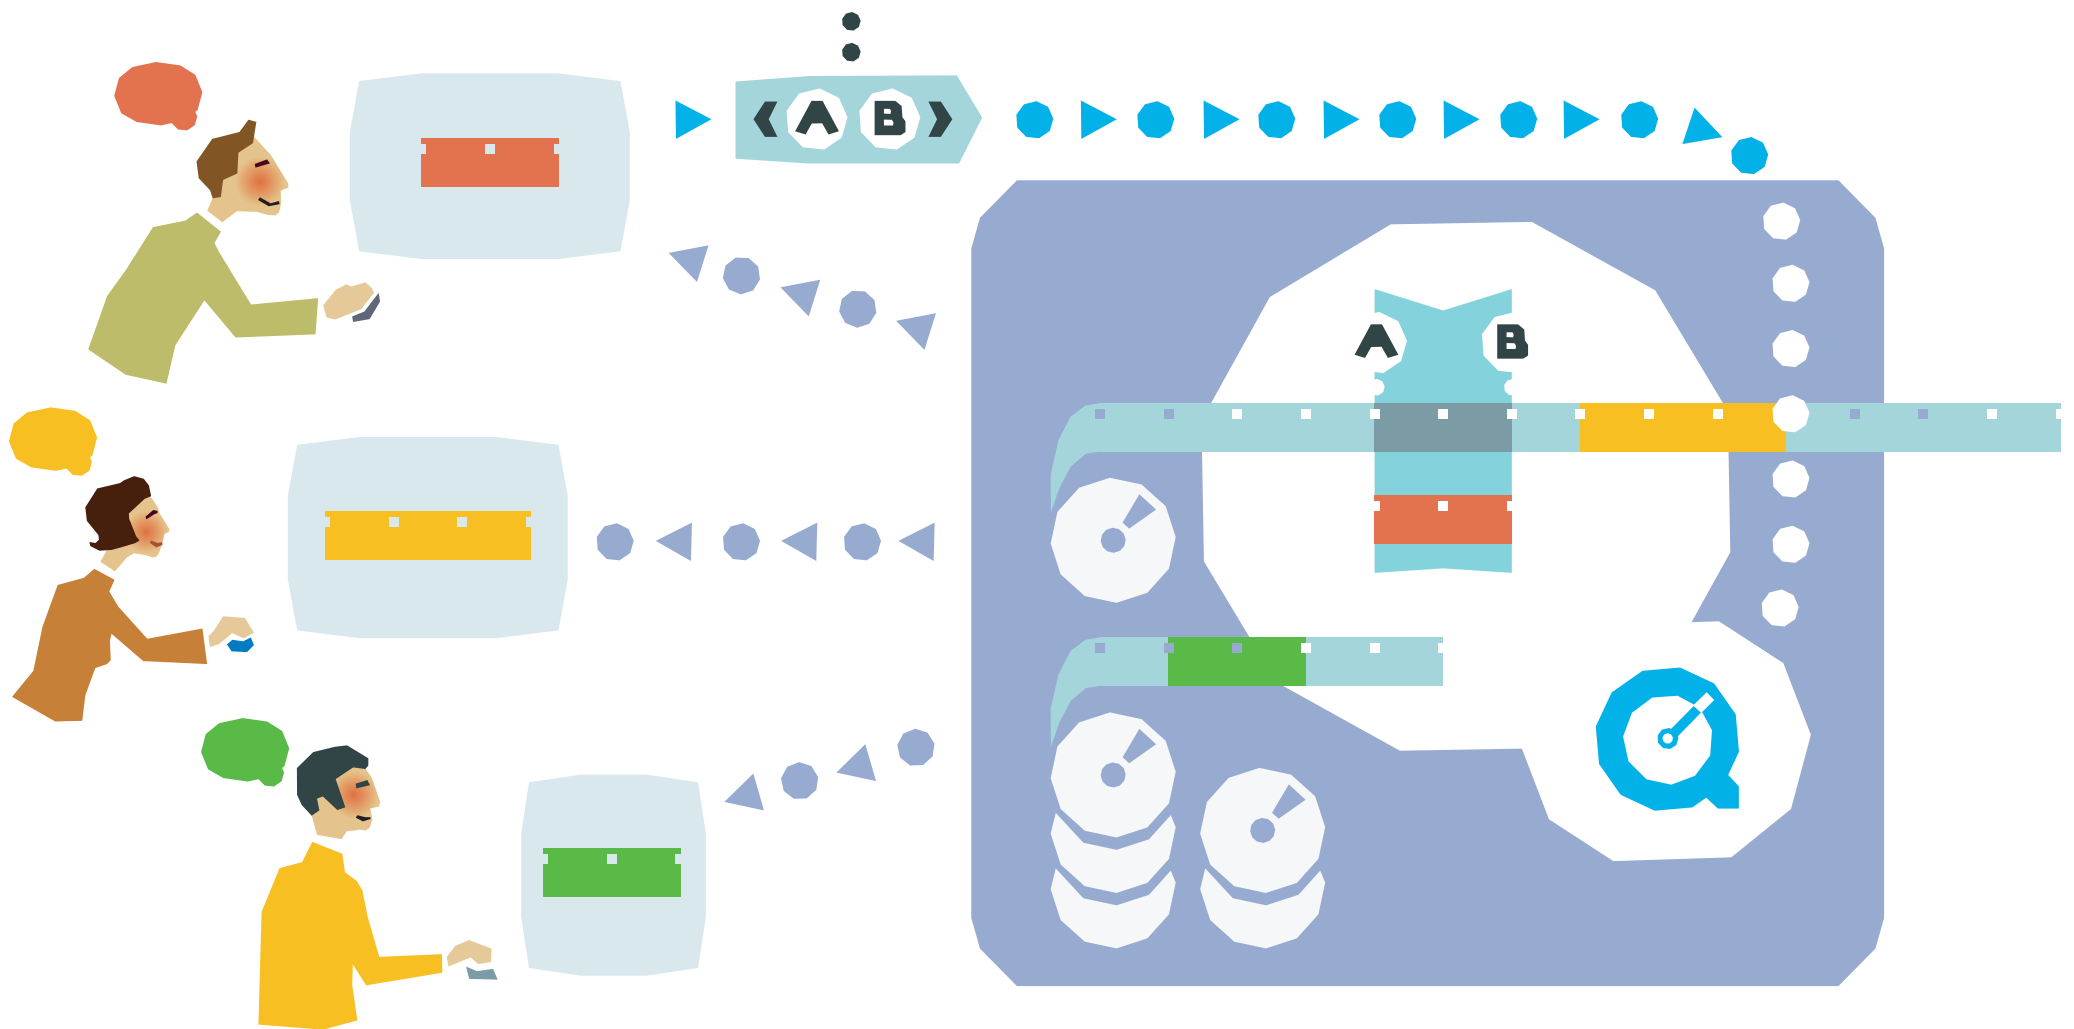

OR

Share the whole video, and download it and watch only the specific segment.

Client Software Requirements  
Quicktime 7.x

Server Software Requirements  
Mac OS X 10.3.x  
Zope or Apache+PHP  
Quicktime 7.x

Using Cutter it is possible to create a link to a specific segment of a video file using timecodes. Cutter enables the dynamic creation of self-contained video segments out of one, bigger video file using simple HTTP requests.
